

INSURANCE - STAFF AUGMENTATION

Results International Systems utilizes Digitek resources to develop and deliver Insurance System Solutions.

Results International Systems or RIS is an out-sourcing and application service provider (ASP) for the property and casualty Insurance industry. The firm offers a complete insurance processing solution that is customized to each client's unique business and product requirements, delivered through an ASP/outsourcing model.

RIS provides cost effective solutions enabling customers to remain competitive in an Internet-driven market place. The RIS Solution is a comprehensive service, providing clients with a web-enabled, end-to-end insurance IT processing system that is capable of supporting all lines of business.

As per Atul Saxena, Chief Executive Officer of RIS, "The RIS solution is designed for Property & Casualty Insurance Carriers and MGAs. Our award-winning solution allows users to deliver new products to market in minimal time and with minimal capital investment in infrastructure, all the while delivering consistent and exemplary levels of service to their insurance customers. We are insurance people first, who know how to effectively implement technology for business results."

The company has consistently turned to Digitek to provide highly skilled personnel on an as-needed basis.

"Our industry has a history of rapid ramp up/ramp down periods. We've been using Digitek since 1996 simply because they can provide the right kind of resource on even the shortest notice. That is their greatest strength in so far as RIS is concerned. Plus they are willing to go the extra distance to make this relationship truly work for both organizations," he added.

Atul Saxena, Chief Executive Officer, RIS

RIS's confidence in Digitek is well placed. Digitek has developed rigorous quality control methodologies for Staff Augmentation services. As a company, Digitek prides itself not only on the selection and retention policies and procedures but also on its methods for managing a distributed work force. These processes and procedures are one facet of maintaining the highest quality control standards.

Such a steadfast adherence to quality has seen Digitek provide a team of 15 consultants to RIS. These professionals have been working in application development and maintenance of various systems for RIS. One of the projects involved the development of an Insurance Processing System on the AS/400, ILERPG, RPG/400, CL/400, DB2/400. Another saw a Web-Based Insurance System development on a Microsoft platform using MS .NET, ASP, VB, VB Script, COM, MTS and SQL Server database. Together these systems include various subsystems such as Insurance Information Processing, Document Classification and Preparation, Security Maintenance, just to name a few.

RIS appreciates quality built into Digitek's processes, procedures, methods and tools, which start with a clear understanding of a client's requirements all the way through retention of resources, accurate billing and monitoring the performance.

Concludes Atul Saxena, "Digitek is very responsive to our needs, which can be quite demanding. We make promises that we must deliver to our clients. Digitek in turn has made promises that they delivered. Together this enables us to provide our clients with the highest quality work."

Technology Platform

**IBM AS/400, ILERPG, RPG/400, CL/400, DB2/400.
